

Pros:

Segmented controls iterated upon to be a contextual switcher, rather than a screen covering distraction

Data tables clearly show team hierarchy in all scenarios, including the combined sub teams and parent team view

Search function is consistent across all segmented views

Cons:

Admins were still confused when selecting multiple users, important and fixable issue.

Admins can only change a user's base role from the parent team feature

Pros:

Segmented controls iterated upon to be a contextual switcher, rather than a screen covering distraction

Data tables clearly show team hierarchy in all scenarios, including the combined sub teams and parent team view

Search function is consistent across all segmented views

Cons:

Admins were still confused when selecting multiple users, important and fixable issue.

Admins can only change a user's base role from the parent team feature

Taking our learnings from parallel prototyping and considering edge case scenarios.

Smaller segmented controls that are scalable in accordance with our design system

Data tables which are clear, scalable and lessen cognitive load

Clarity in user action while meeting engineering constraints
